TOFINO®

Protect your Facility from the New Wave of Cyber Security Threats.

Eric Byres is one of the world's leading experts in critical infrastructure.

He is VP and CTO of Tofino Security, part of Belden's Hirschmann brand, and a speaker at the conference.

HIRSCHMANN
A **BELDEN** BRAND

68th Annual Instrumentation Symposium for the Process Industries 2013

College Station, Texas
January 22-24, 2013

Since the discovery of Stuxnet two years ago there has been exponential growth in government security alerts regarding ICS and SCADA systems.

How to address these issues is a critical question, especially for the many legacy control systems in use today. One possibility is the patching model used in the IT world.

Eric Byres' presentation examines this strategy for the ICS world, and explores alternatives such as compensating controls.

Learn about cyber security for the process industries and the challenges of patching to mitigate threats:

• Meet with Eric Byres and/or Frank Williams during the Symposium:
Email laura.mattson@belden.com to reserve a time

• Attend Eric Byres' presentation:
"Patching for Control System Security - A Broken Model?"
Wednesday, January 23, 2013 at 10:10 - 10:50
